LONDON--[Edenville Energy PLC](#) (EDL.LN), a coal focused African energy exploration and development company, said Monday that it has received the initial Mkomolo deposit float and sink drill assay results, adding that the results confirm coal grades and continuity of coal measures.

MAIN FACTS:

- Further positive indications of thermal quality coal mineralization
- Drilling intersections indicate coal continues to the north of April 2012 resource drilling area
- Upgraded Mkomolo resource statement expected 1Q of 2013 with further results from the Rukwa coalfields to be reported during 2012
- Drillhole results confirm coal measure widths between 4 meters and 14 meters within southern portion of the Mkomolo Basin
- [Edenville Energy](#) shares at 0849 GMT up 9.3%, at 0.2 pence, valuing the company at GBP9.56 million.
